Simulation Filter Elements

christoph.schulz@mann-hummel.com

- Diploma Aeronautics and Astronautics, University of Stuttgart
- PhD at Institute of Aerodynamics and Gas Dynamics, University of Stuttgart
 - Numerical Simulation of Atmospheric Boundary Layers and their Interaction with Wind Turbines
- Joined MANN+HUMMEL 2018
 - Simulation Engineer
 - Product Owner & Product Expert
 - Manager Simulation Filter Elements

MANN+HUMMEL

Speaker Introduction

- Graduated in Chemical Engineering at the University of Stuttgart
- PhD thesis at the Fraunhofer IGB / IGVT University of Stuttgart
- Joined MANN+HUMMEL in 2011:
 - Lead Product Engineer, Department of Oil Filtration
 - Simulation Engineer, Department of Simulation Filter Elements

Dr. Thomas Gose

Smart Filter Element Development Use Cases at MANN+HUMMEL

Expert Users

Element Scale

- **Product Optimization**

- Performance
- Material Costs
- Pressure drop
- Locations of Air Cleaners

- **FEA Example**

- Mass / cost reduction targeted while keeping collapse strength
- AMOP used
- ~ 6% mass reduction achieved

Characterization

- Fiber characteristics
- ✓ Fiber type
 - ✓ Fiber diameter d_f
 - ✓ Fiber shape $a \cdot b^{-1}$
 - ✓ Fiber orientation α_f

- Fiber structure
- ✓ Number of layers n
 - ✓ Fiber mix ϕ_f
 - ✓ Grammage G
 - ✓ Thickness t
 - ✓ Packing density $1-\epsilon$

- Media performance
- ✓ Pressure drop Δp_0
 - ✓ Efficiency η
 - ✓ Dust holding capacity dhc
 - ✓ Particle collection $1-\epsilon$

Total design concepts: **4096**

Computation time for $\Delta p_0 / \eta_0$: ~4.0 hours per simulation

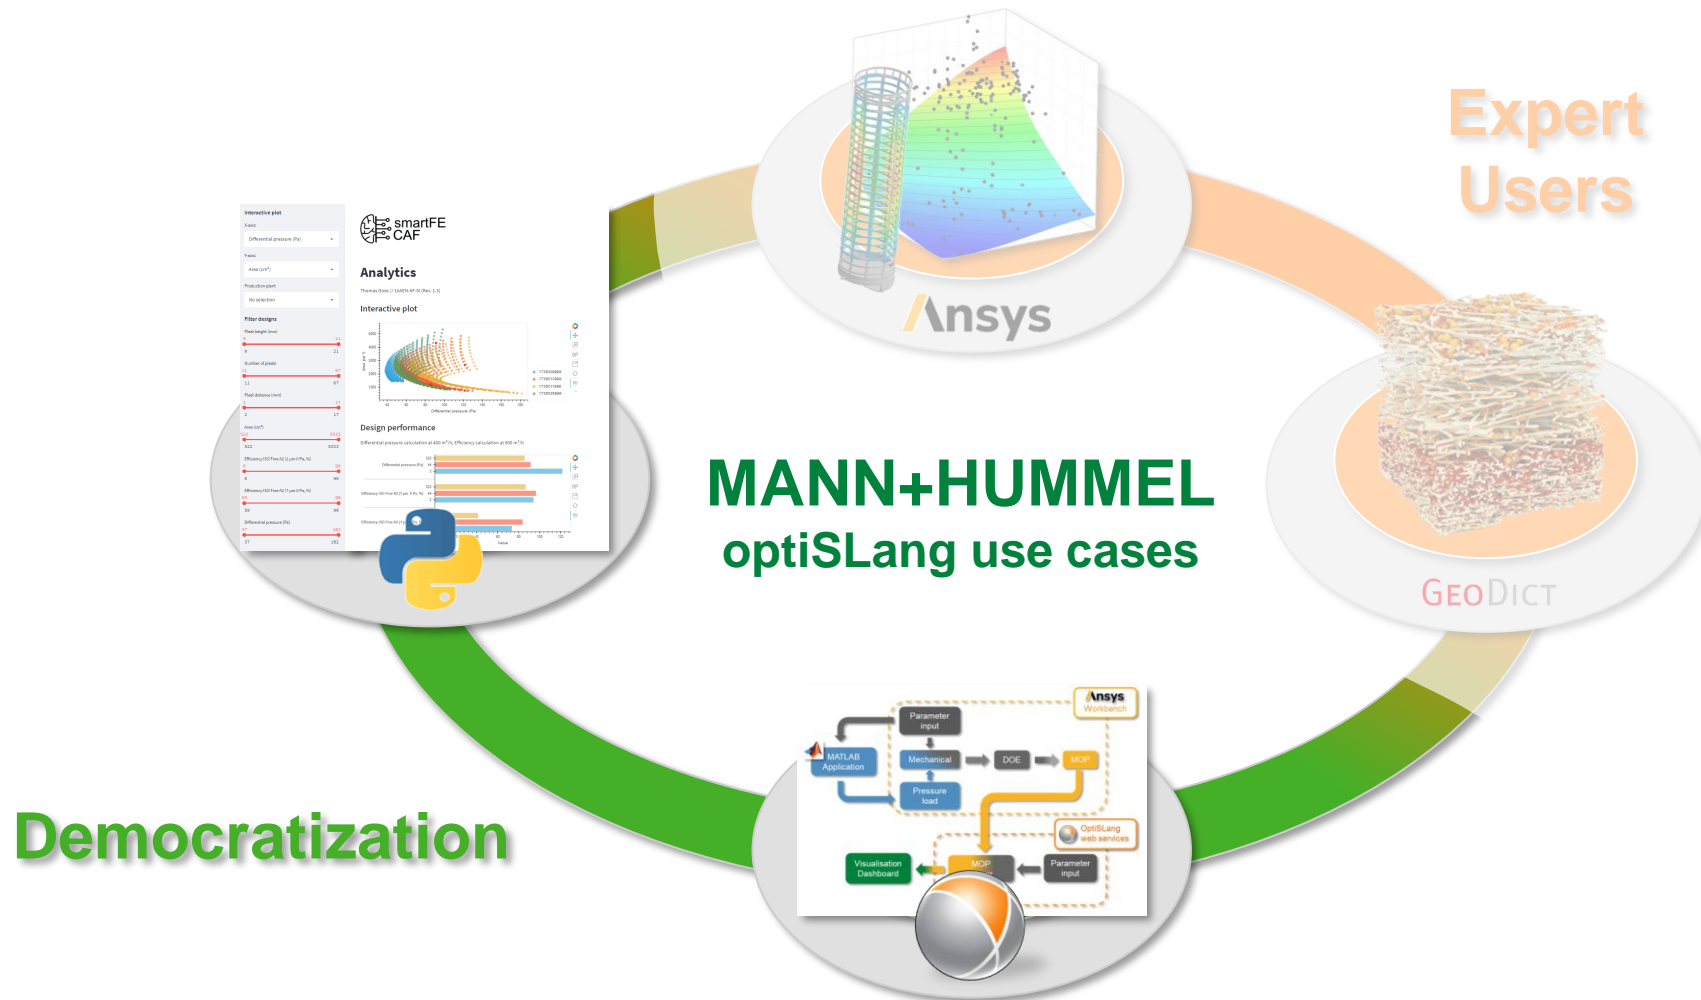

➤ ~16 k hours (680 days)

Computation time for **dhc**: ~2.5 weeks / ~420 hours per simulation

➤ ~1720 k hours (196 years)

- manageable only by high degree of automation
- reduce effort by using optiSLang

“What is the optimal filter media and the optimal filter element design to achieve a given specification in my design space?”

- ### Features
-  Web-based application for global use
 -  Fast + intuitive element design workflow
 -  Interactive “what if” analysis + multi-objective optimization
 -  Reliable element performance prediction

Customer requirements	Filter type	Document Number
Length [mm]	315	226
Width [mm]	300	300
Height [mm]	200	200
Standard (Standard)		
Adhesion (Adapt)		
Sealing with (Dichtung Subst)		
Sealing material (Dichtung Material)		
Filter material (Filtermaterial)	173010009	173010009
Print Filter (Druckabdruck)		
Print pleat sealing (Druckabdruck)		
Remarks regarding design / variant		
Pleat height (Faltenhöhe) [mm]	19	30
No. of pleats (Faltenanzahl)	75	75
No. of covered pleats (Anzahl bedeckter Falten)	0	0
Media area (Medienfläche) [m²]	6.736	9.958
Flow distance (Fließstrecke) [mm]	6360	6360
Wash Water media (Washwater) [mm]	0.10	0.10
Wash Water (Washwater) [mm]	1.8	2.8
Differential pressure drop		
Nominal air flow 300 m³/h Pa	2.076	1.246
Nominal air flow 400 m³/h Pa	0.19	0.09
Nominal air flow 500 m³/h Pa	0.09	0.09

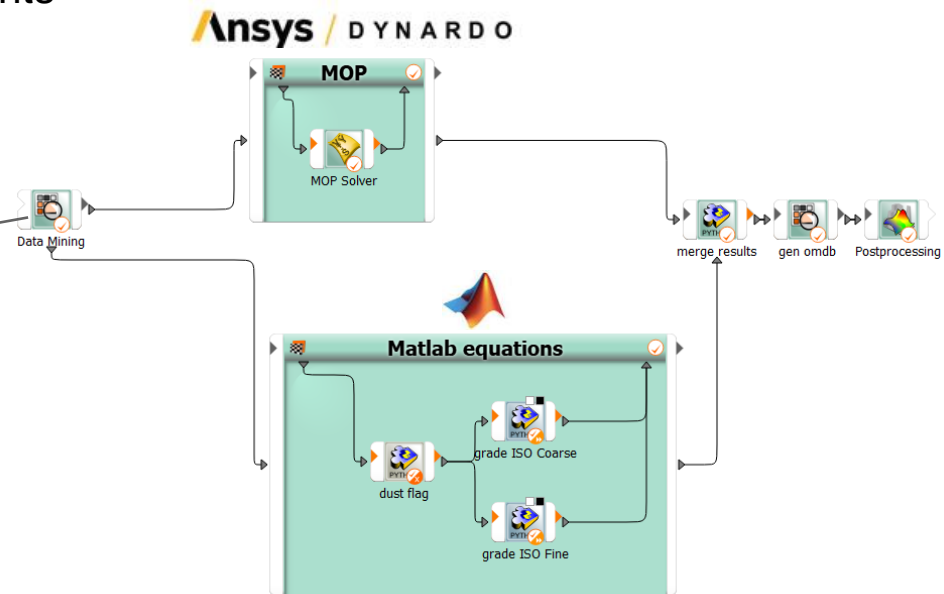

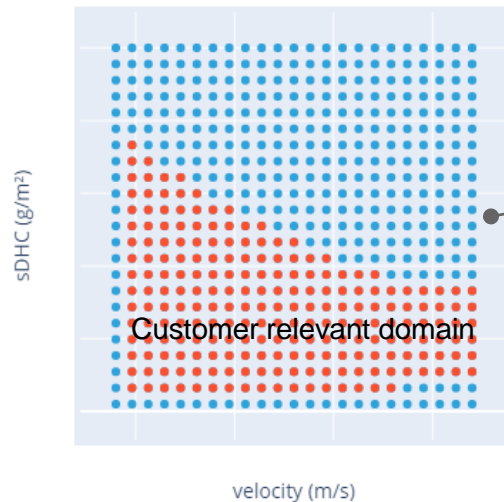

Democratization

Example 1: Model generation comparison

Case definition:

- Well defined physical prediction equations available
- Input data: 168 experimental measurements
- Setup: 3 parameters, 3 responses
- Side-by-side comparison of response prediction results from MOP and curve fitting model
- Static DOE - full factorial layout with 1058 design points

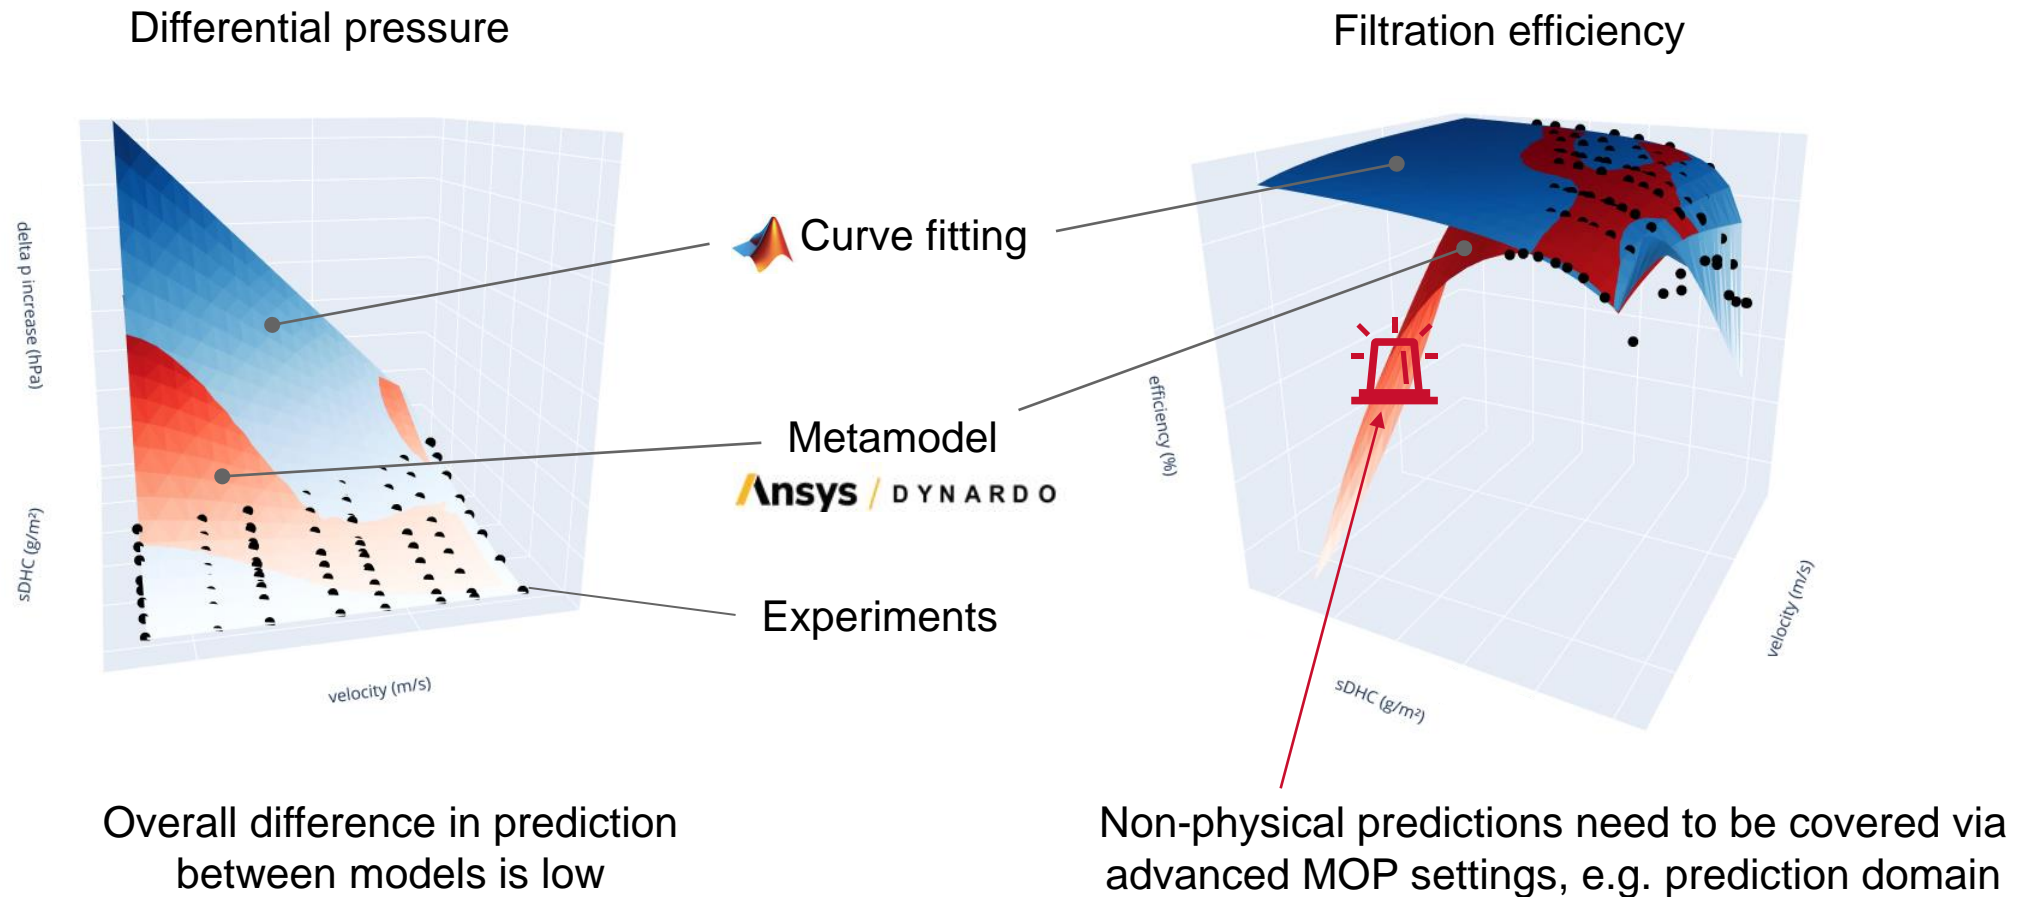

Ansys / DYNARDO

Response	CoP	CoD adj.	CoD adj.
Δp	0.995	0.996	0.985
Efficiency	0.987	0.993	-
Penetration	0.993	0.996	0.958

Democratization

Example 1: Model generation comparison – results

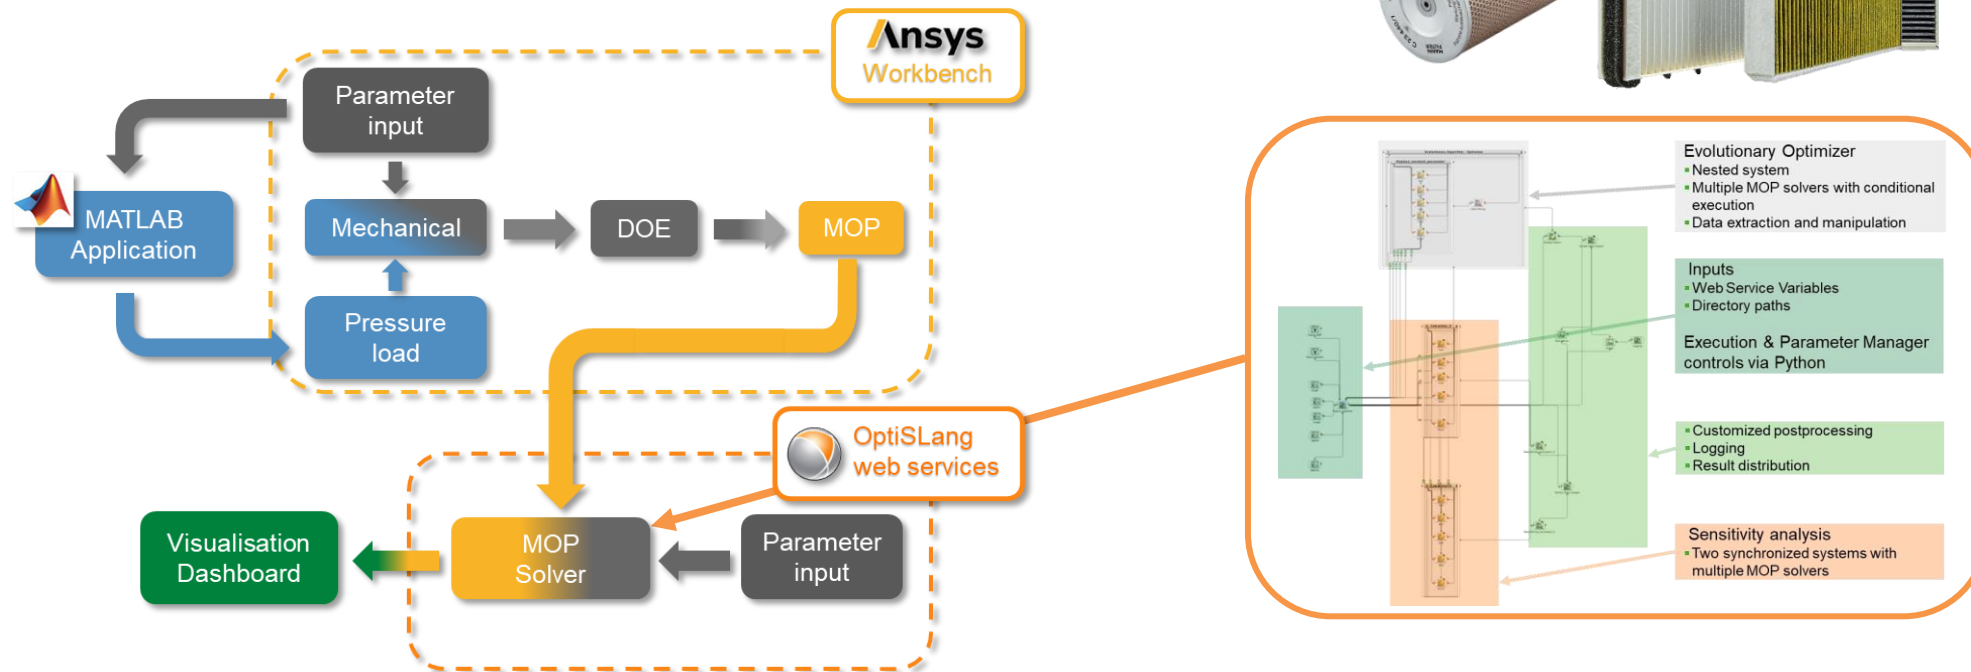

Democratization

Example 2: A MOP based workflow

Challenges:

- Constrains for sampling → clustered design space
- Approximation quality → reduced model range
- Multiple scenarios → modifying placeholder file, conditional executions

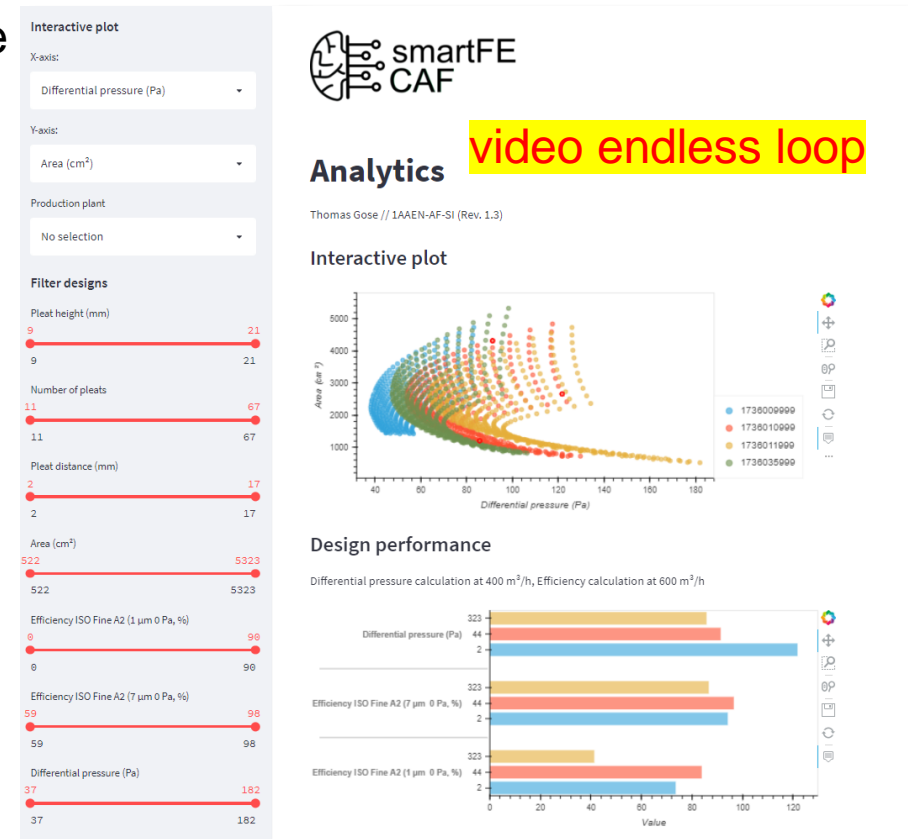

Democratization

Example 3: Customizable visualization capabilities

For our democratized applications interactive, customizable visualizations are an essential asset to

- ... visualize complex, multi-dimensional data,
- ... foster what if scenario evaluations,
- ... enable multi-objective optimizations,
- ... enhance user experience,
- ... **take better design decisions.**
